

Management.

Alpacas evolved in the harsh conditions of South America therefore they are able to utilise their feed accordingly.

They are ruminants and will do best when provided with clean pasture with access to high dry matter long fibre such as hay or haylage.

Their intake can be supplemented with our rations to assist in increasing the Protein level content of the diet.

Our diets also contain the high levels of vitamins and minerals to supplement the background levels in their basal feeds.

Always make changes in diet gradually, we recommend a period of at least one week.

The Alpaca should always be provided with basic shelter. This will protect them against excess heat in summer and bad weather in the winter months.

Alpacas must always be provided with clean fresh water.

Ingredients.

We believe at GLW in a policy of open declaration.

GLW have produced a range of diets manufactured from only high quality ingredients.

Our customers can have the confidence in knowing each of these ingredients has a proven nutritional value.

Our decision to use only quality raw materials will ensure that our customers receive diets designed for optimum performance.

GLW and their products are UFAS approved.
